

Compusense20 Lite

Why Compusense20 Lite?

- Compusense20 Lite is an entry-level software for consumer and sensory testing.
- If you're new to the process, and need to start running basic quality, discrimination or consumer tests, then Compusense20 Lite is built for you.
- You should consider Compusense20 Lite if you're looking to:
 - Ensure your product quality, understand your product and understand your consumer
 - You can collect and analyze data on an easy-to-learn platform
 - Get fast, reliable and actionable reports

Why bother with product testing?

- There's nothing more important than earning your customer's trust. The trust that when they buy your product, it's what they expect, every time.
- Personal opinions vary wildly, because we're all different. So how do you get objective results that let you make decisions confidently?
- This is where the science of Sensory Evaluation really helps! Compusense can teach you how to ensure your product quality, improve your development process and increase your consumer understanding!
- And your product delivers results to your bottom line!

Compusense20 Lite- what's included:

A simple approach to experimental design for products.

- Compusense20 Lite designs help you control for different areas of bias in an experiment, such as the positional or order effects of products you're testing.
- Choose from
 - Fixed Order Designs, where Panelists all receive the same order
 - Balanced Designs, where sample position is balanced across orders

Compusense20 Lite- what's included:

An easy way to manage and communicate with Panelists.

- You can have as many panelists as you need
- Email your panelists directly from Compusense20 Lite
- Send them links to tests so that they can participate in surveys or product tests from wherever they are
- Review your panelists' history

Compusense20 Lite- what's included:

An easy way to train your quality and profiling panelists.

- Use our Feedback Calibration Methodology (FCM) to train your panelists
- FCM speeds up training for visual, odor or taste attributes
- FCM helps keep panels calibrated, and engaged, so that you know that your results are robust and reliable
